- Marketplace for all the levels of farmers
- Give real time price and past comparision
- Real time inventory management with expiry date
- Hub for latest and greatest agricultulture information

Made with in mind of:

Farmer

Wholesaler/Retailer

Consumer

How System Works?

- Farmers upload crop details into the system.
- Buyers browse and place orders.
- System tracks inventory and updates stock.
- User gets the weather/price information.

Key Feature:

- Farmer Dashboard
- Buyer/Market Dashboard
- Inventory and Stock Management
- Report of Sales Analysis

System Design:

Fig: ER Diagram (Crow's foot)

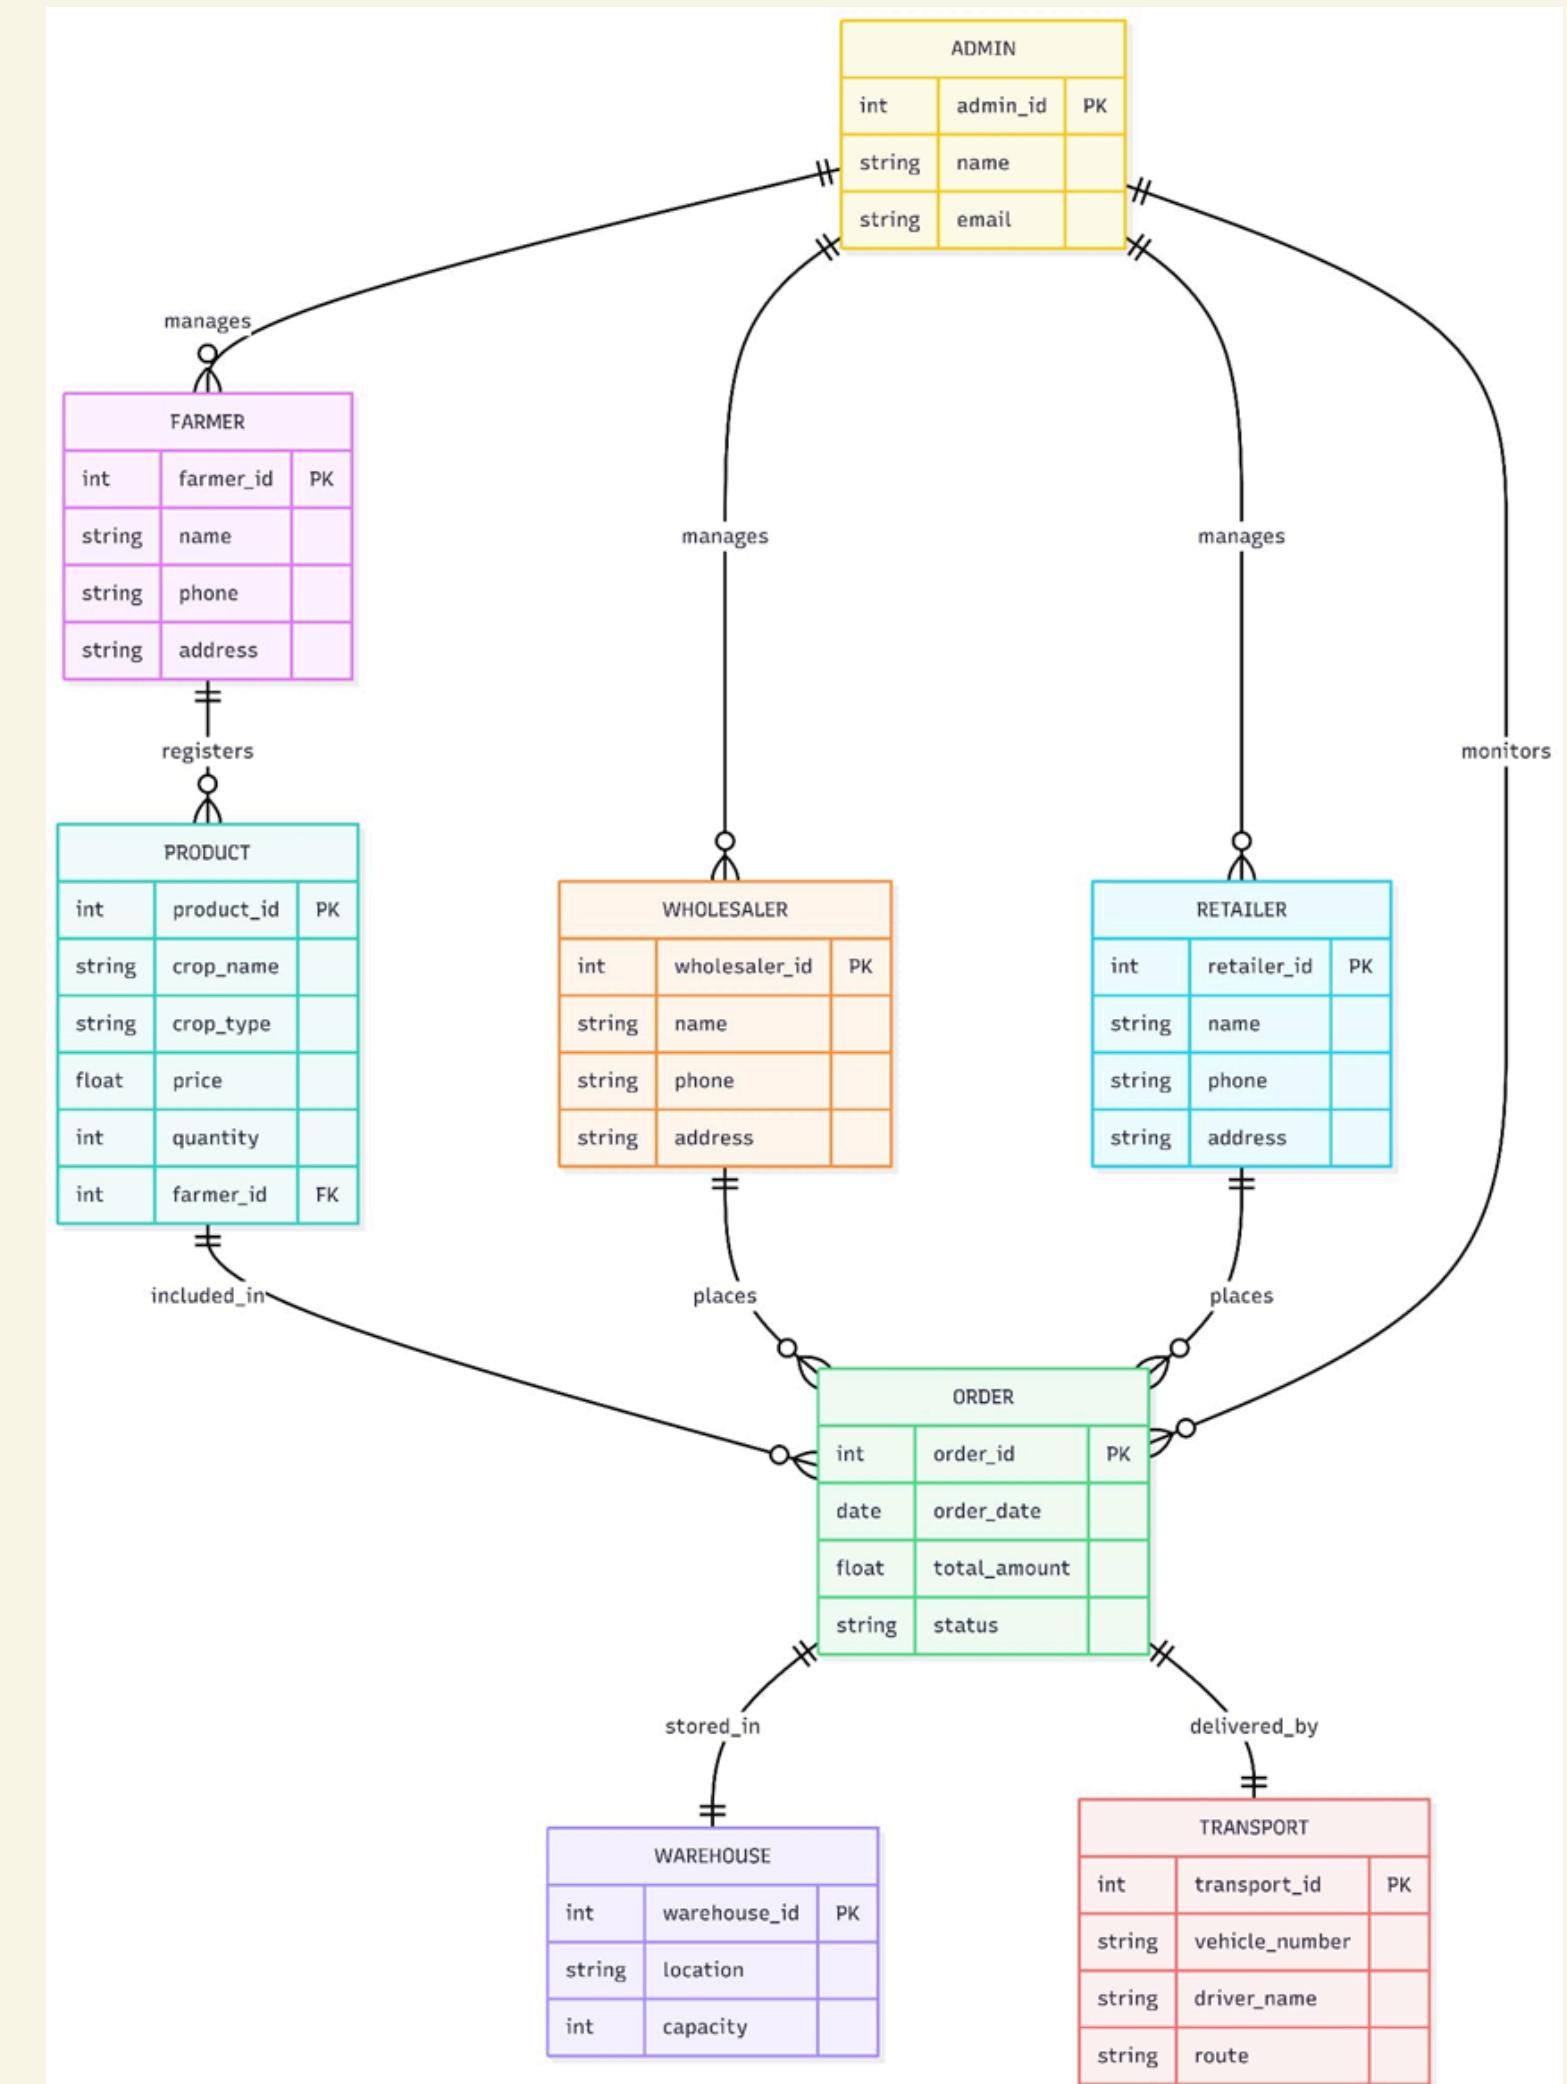

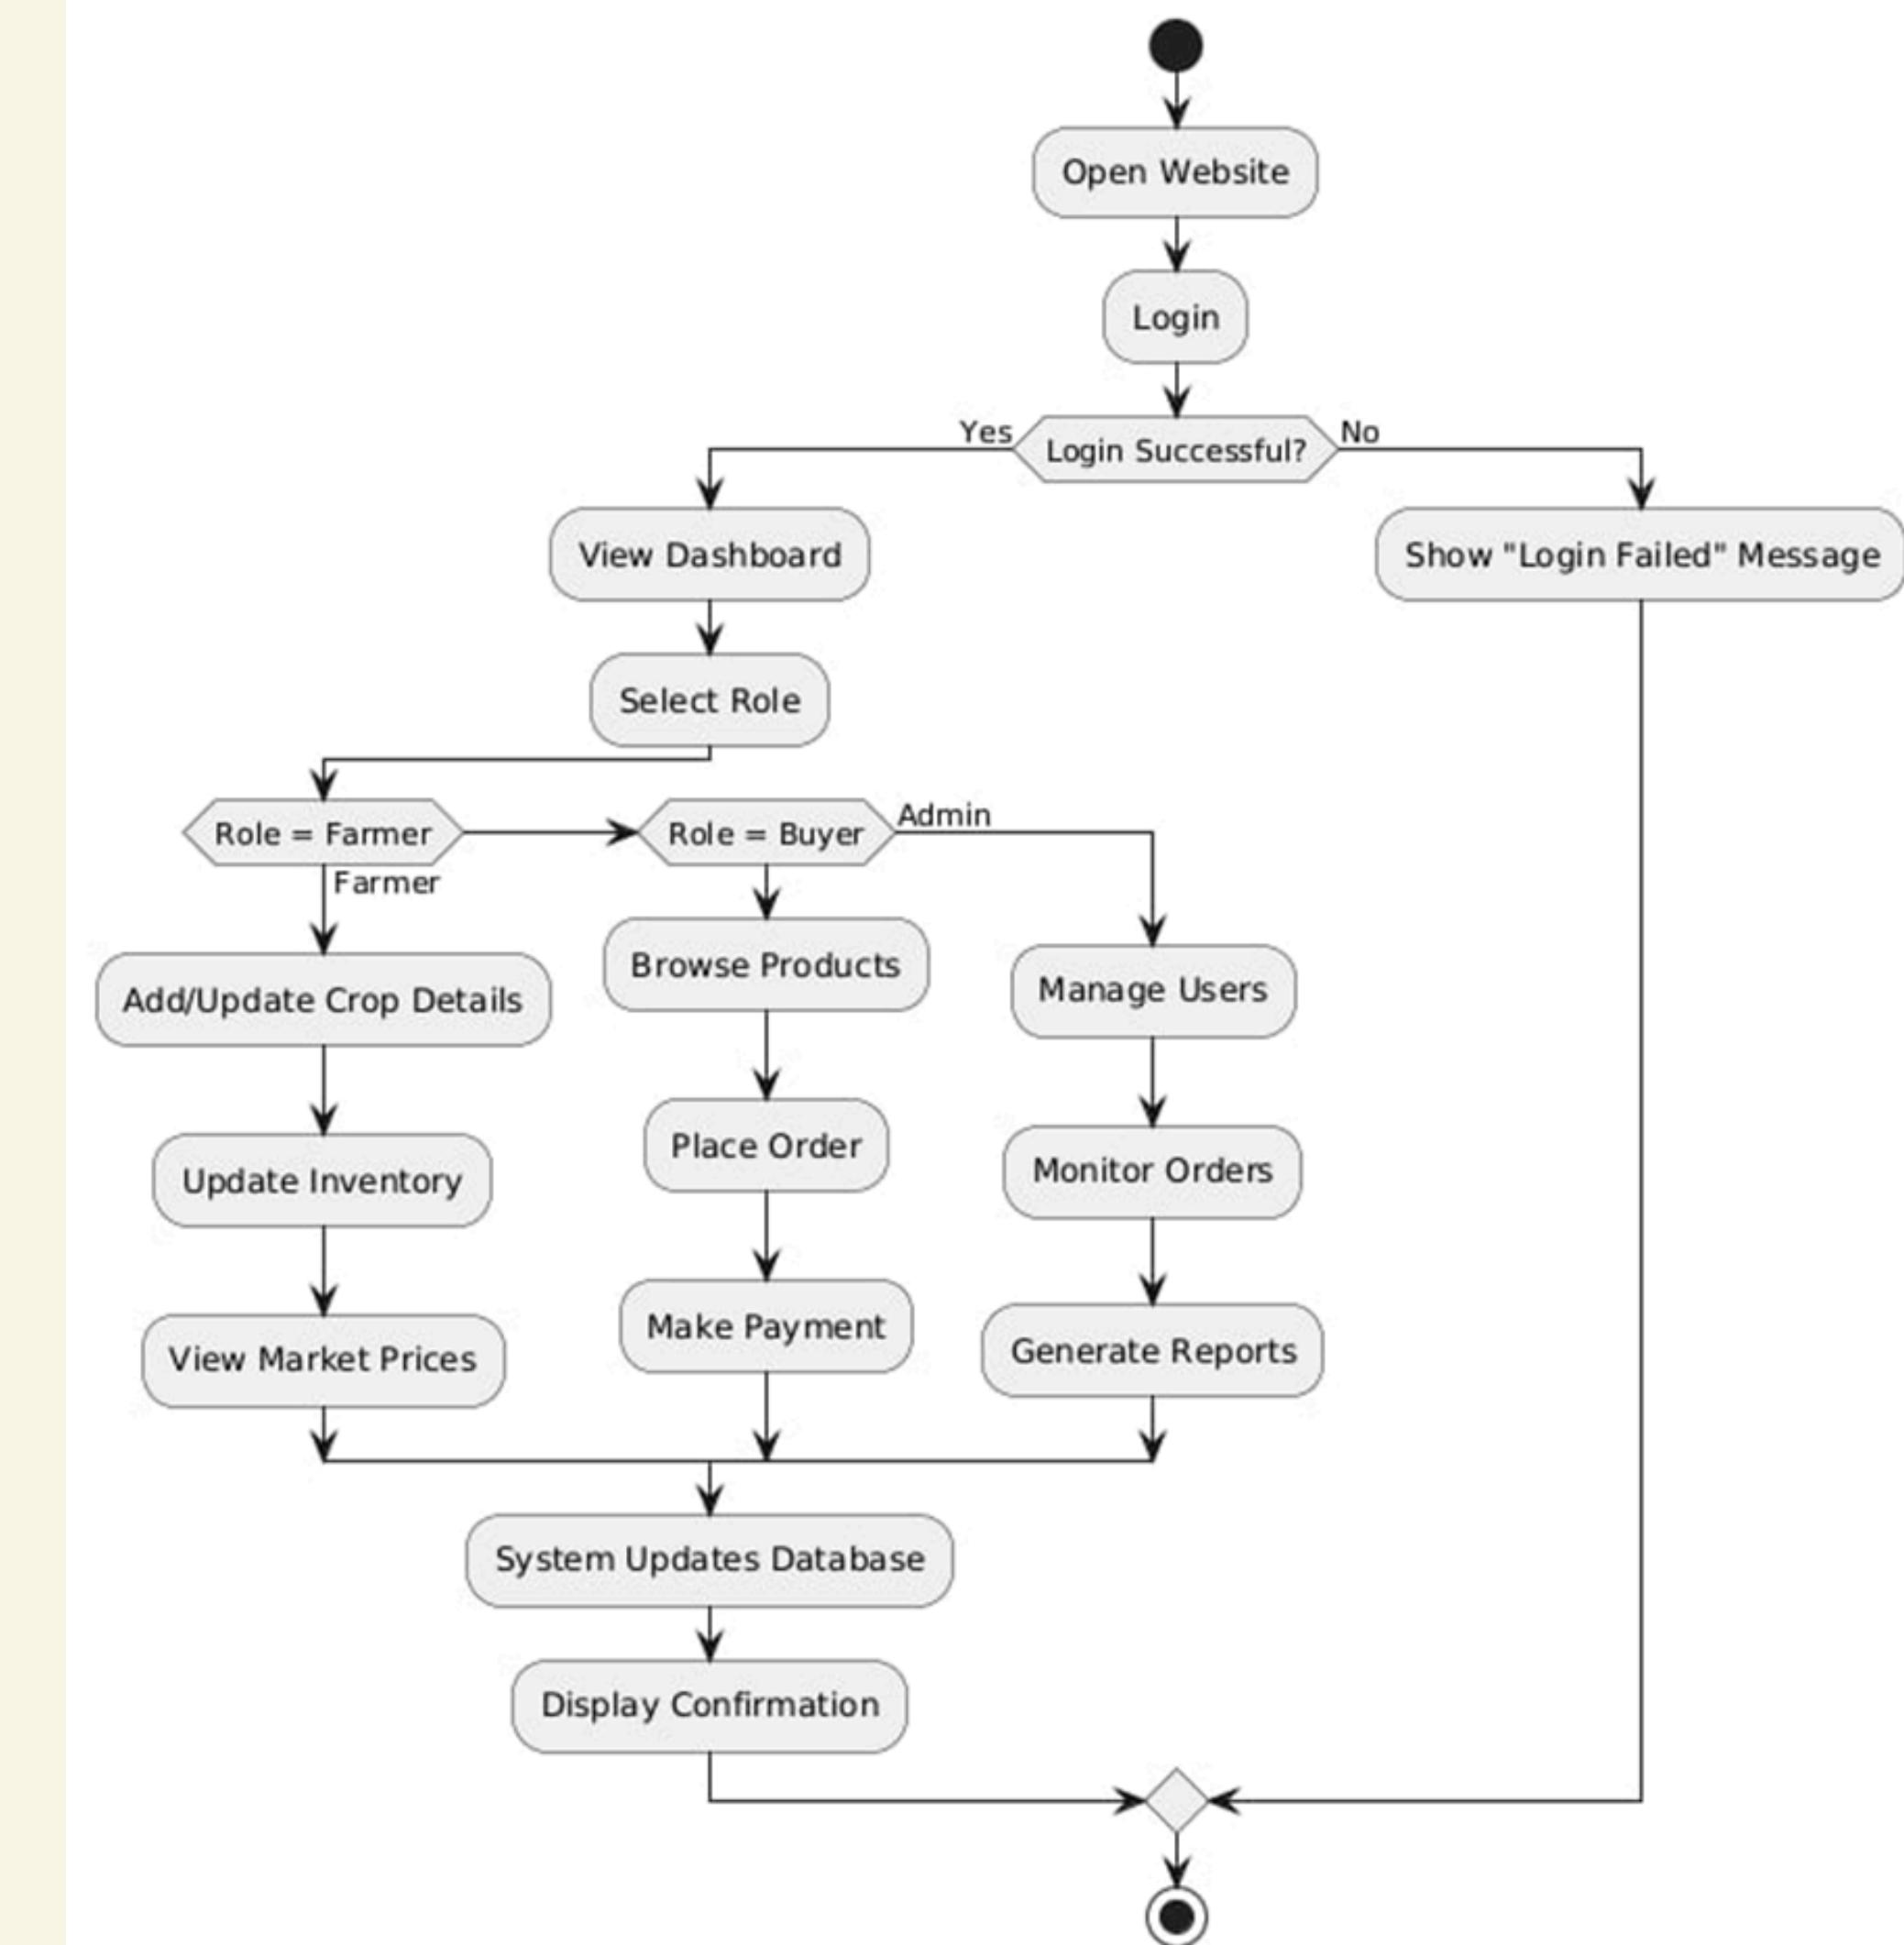

Fig: Activity Diagram

Technologies:

Tools: VS Code

Database: Postgresql

Platform: Windows

Language: HTML, CSS, Javascript, Python

Framework: Django, Bootstrap

Expected Outcomes:

- Better profits for farmers
- Coordination between farmers and buyers
- Centralized and Standardized Agriculture data management
- Cheaper and Stable pricing of groceries

Timeline:

Phase 1 (1st Week): Proposal & Planning

Phase 2 (2-3rd Week): System Analysis & Design

Phase 3 (4-5th Week): System Development

Phase 4 (6th Week): Integration and Testing

Phase 5 (7th Week): Documentation Completion

In short:

- Middlemen-driven supply chains reduce farmer profit while increasing market prices for buyers
- Inari creates a platform for farmers and buyers.
- Inari digitizes the agriculture system in Nepal.
- Project is well feasible within the given time period.
